

# CHILLER SERVICES

RIGGING & DEMOLITION

**“When faced with tight deadlines and budgets, subcontracting Chiller Services for any of your rigging and demolition jobs makes economical sense”**

Chiller Services specializes in the demolition and rigging of chillers, absorbers, generators, air-handlers, pipes, pumps, boilers, and related mechanical room equipment. We have the labor, equipment and storage capacity to receive, unload, and store your new equipment before hauling, rigging and anchoring your equipment in place. We can also help facilitate plant moves and relocation projects.

Chiller Services has been instrumental in some of the largest chiller change-outs in the Southern California and San Diego areas. We have utilized helicopters, cranes and specially designed equipment to rig chillers in extreme locations from high-rise buildings, and penthouses, to basement mechanical rooms with minimal access.

With over 40 years of combined experience in the industry, we are equipped to take on any job, complete it on time, and in the safest way possible.

## Safety

Dedicated to the highest standards of safety and job performance, Chiller Services assesses each project for complexity and safety. Every precaution is taken to ensure minimal impact to the job site.

Chiller Services cut up and removed an enormous atom accelerator from a basement at Cal-Tech University in Pasadena, California, well within the budget and deadline.

## Flexible Hours

We work around regular hours of operation to minimize client's down time or production delays.

## Customer Satisfaction

Most of our clients are referrals from our satisfied customers. We encourage you to give Chiller Services an opportunity to bid on your next project so you too can experience dependable, on-time service.
